

WHY REPLACE WHEN YOU CAN RENEW?

Condensate Drain Pans: Resurface

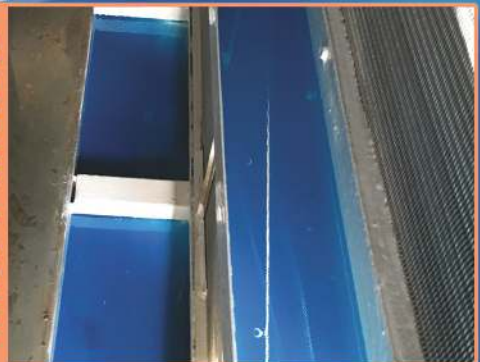

You've seen them. Drain pans covered in rust, holes in the bottom, leaking water all over the area. But it can be costly to replace the entire drain pan, or worse, the entire unit. Instead of replacing, we developed a way to resurface and recycle. Keep your drain pan, and make it fresh as new. This family of products will beautifully resurface a drain pan and its surroundings, without costing you an arm and a leg.
